

# User Management Screen UI Specification Document

## Page Overview

The User Management Screen consists of two main sections, positioned side by side: the User List (on the left) and the User Details (on the right).

## User List

The User List displays all users in a table with the following columns:

- ID
- User Name
- Email
- Enabled

## Example User Entry

For example, a user entry might look as follows:

- ID: 1
- User Name: Admin User
- Email: admin@piworks.net
- Enabled: true

## User Details

The User Details section is used to input the details of a new user or to edit the details of an existing one. It contains the following input fields:

- User Name
- Display Name
- Phone
- Email
- User Roles: This is a dropdown menu that allows for the selection of one of three roles: Guest, Admin, or SuperAdmin.
- Enabled: This is a checkbox that determines whether the user is enabled or not.

## Controls

The top of the page hosts a set of controls, distributed between the User List and User Details sections:

- "+New User" button (top left): When clicked, it clears the User Details section on the right to prepare for input of a new user's details.
- "Hide Disabled User" button (immediately to the right of +New User): When clicked, it filters the User List table to exclude users where Enabled = false.
- "Save User" button (top right): When clicked, it saves the inputted/edited user details.
